

## NIG - THE SPECIALIST IN NATURAL DYES

As one of the first European companies, NIG created standardized natural dyestuffs for non food applications in the early 90's with special focus on industrial textile dyeing.

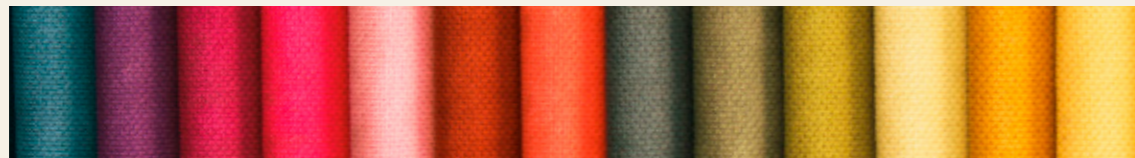

Today NIG produces and commercializes a wide range of natural dyestuffs with unique qualities and characteristics.

Our natural dyestuffs are extracted from different renewable natural resources. They are provided in a standardized powder form, easy to use for industrial and artisanal applications like textiles, leather, paper, furniture or cosmetics, plastic or paints.

We offer you our know-how and a worldwide network of specialists, designers and industrial partners to realize your project from laboratory and pilot scale services up to industrial implementation.

The presented color cards are some examples of the great potential of NIG natural dyes on different fibres.

Don't hesitate to contact us with your request.
